1.0 Introduction

1.1 Purpose

Detail changes to the Schools Online Thesaurus

1.2 Audience

ScOT Consultative Group and other interested parties.

1.3 Background

The Thesaurus Analyst regularly identifies and manages subject branches in need of top-down revision. A branch revision is a top-down analysis of a subject area, such as Mathematics, Arts etc. It includes quality assurance of relationships against specifications and addition/ revision of terms where appropriate.

Most changes in v6.2 arise from top-down analysis of the Arts, Social science and Health areas. Arts and Social science have been improved where reference structures were too flat or were not compatible with other reference structures. Analysis of the Health branch lead to expansion by filling subject gaps, including those under second level terms Disabilities and Diseases.

Maintenance level changes arising from various content projects are also detailed in this report.

2.0 Issues arising

2.1 Arts

Many area under arts needed intermediate terms to distinguish different organising principles. For example, many NT1s under Visual arts are now located under sibling term “Regional arts”, such Aboriginal art, Australian art, American art etc. Likewise, Regional music is a new term under Music.

Terms under Visual arts are not further subdivided by geographic concepts; not valid terms now include Australian sculpture, French painting.

Literature is moved from under top term Language to under Arts, and is given a similar treatment with regards to geographical subdivision. New term “Regional literature” has Albanian literature and Arabic literature, but Albanian poetry and Arabic poetry are not valid in v6.2.

“Art movements” is further developed, with terms like Bauhaus and Orphism taken out from under Visual arts and Painting respectively and relocated with other movements and periods. And new second level term “Art themes” is the new term for Landscapes (previously Landscape painting and Landscape drawing), Nocturnes and Portraits.

Films is also moved across from under Media production.

The resulting top level is:

Arts

NT Architecture
 Art movements
 Art themes
 Dance
 Design
 Films
 Literature
 Music
 Regional art
 Theatre (Arts)
 Visual arts

2.2 Society

Psychology logically branches into a number of subject areas, including Science and Health. It also dovetails closely with sibling terms Human relations and Social services.

Both the composition of the Psychology reference structure and its location within the broader thesaurus is likely to be subject to further revision.

Social services is moved across to Health and Religion promoted from underneath Culture.

The resulting top level is:

Society

NT Culture
Environmental management
Human relations
Law
Media
Philosophy
Politics
Population (Society)
Psychology
Religion
Social services

2.3 Health

In an attempt to enumerate different types of disabilities, a brief reference structure was instead created that aligns with accessibility profiles:

Disability

UF *Disabled*
BT Health
NT Cognitive impairment
Hearing impairment
Physical impairment
Visual impairment

The diseases and disorders leading to these profiles are expanded mainly under Diseases. Bridging these areas are RT relationships between, for example, Visual impairment and Eye diseases. The latter has NTs Astigmatism, Blindness, Cataracts etc.

Diseases

UF *Disorders*
Illnesses

Pathology

BT Health
NT Animal diseases
Cancer
Cardiovascular disease
Disease transmission
Drug addiction
Immune disorders
Mental disorders
Metabolic disorders
Organ-specific pathologies
Paralysis
Respiratory disease
SIDS

Drugs reference structure was expanded with a number of candidates, but many new terms were allocated Provisional status after a number of attempts to arrange these concepts in a suitable and intuitive structure (see Provisional terms below). Terms under Public health are relocated as Public health is now equivalent with Health care, which has moved with Social services out of Health and to Society. And Natural disasters, which was previously under Safety, is moved under Earth and space.

The resulting top level is:

Health

NT Disabilities
Diseases
Drugs
Medicine
Nutrition
Physical fitness
Safety
Sanitation.

3.0 Statistics

Table 1 - Preferred, Non-preferred and Top terms

	6.0	6.1	6.2
Top Terms	10	10	10
Total terms	10,321	10,496	10,514
Preferred	7,666	7,730	7,430
Non-preferred	2,655	2,766	3,084
%Percent non-preferred	25.7%	26.4%	29.3%

A common question facing thesaurus developers is “how many levels”. Targets for hierarchy depth are sometimes arbitrarily assigned (eg “5 to 7”).

An alternative approach is to manage and report the proportion of terms at each level. Details of how many levels a thesaurus ‘drills down’ should be presented within the context of where most indexing terms are located.

Figure 1 shows changes between version 5.2, 5.3 and 6.2 with regard to the number of terms at each level. The graph shows little change at the second level or for levels 3 or 5. There is a spike of level 4 terms in version 6.2 which is due to approved candidate terms added to the existing structure.

Table 2 - Term level proportions

At level 6 and 7 there is a substantial decline in the number of terms. An increase in overall non-preferred terms partly accounts for a reduction in preferred terms at all levels, except in version 6.2 where there is a noticeable increase in level 4 terms.

In version 6.2, About 90% of terms fall within the top 6 levels. This compares with 86% in version 5.3 and 80% in 5.2. This represents a trend towards an even triangular shape, where each term branches out to not-too-few but not-too-many narrow terms. Balancing the number of NT references for each term means ease of browsing to relevant topics without limiting a multi-faceted approach to dividing concepts.

4.0 Approved term

Candidate terms approved in ScOT version 6.2.

A cappella	NT: Methadone
