1 Introduction

1.1 Purpose

Report changes to the Schools Online Thesaurus.

1.2 Audience

ScOT Consultative Group and other interested parties.

2 Background

2.1 Australian Curriculum

Following publication of the four 'shaping papers' in May 2009, ACARA (then known as the National Curriculum Board) published draft curriculum statements in English, Mathematics, Science and History for years K-10. The statements were released for consultation on 1 March 2010 and are available with registration at <http://www.australiancurriculum.edu.au>.

The shaping papers provided important clues to subject gaps in ScOT and accounted for many changes to ScOTv6.4. The draft curriculum statements have provided more significant warrant for assuring the currency, completeness, and accuracy of ScOT terms. ScOTv6.5 aligns closely with the Australian curriculum while retaining reference structures and word stock built up over 8 years of consultation with the school sector and via application to many substantial content projects.

2.2 Validation survey

When ScOT terms are selected, both literary and user warrant are considered. A validation survey was conducted in May-June 2010 to elicit the latter – search terms used by teachers to access curriculum objectives or resources.

The survey informed final edits to ScOTv6.5, including:

- Selection of preferred terms; and
- Arrangement of terms within existing reference structures.

The survey also helped to identify high level issues in ScOT, notably the absence of 'Geography'. Geography concepts are generally arranged under Science > Earth and space, and Society. Draft Geography curriculum is anticipated in 2010-2011 and will be invaluable to review of Geography and reviewing the need for a top level Geography heading.

3 ScOT data release

ScOT point releases follow a feedback cycle involving users, curriculum experts, school jurisdictions and education agencies via the ScOT Consultative Group. The ScOT Management Group has final approval of each release. This quality assurance process continues to be invaluable to the relevance and currency of ScOT to the ANZ school sector.

In-between point releases, mini-batches are released. Stakeholders can access information about new terms published or modified between in mini batches (such as between ScOTv6.4 and ScOT6.5) by accessing ScOT data from the website or via web services. All changes are later detailed in quality assurance summaries (like this document).

Note: only recommended formats have date properties for terms; for new terms and modified terms the properties are:

- SKOS RDF: <dct:issued> and <dct:modified>;
- IMS VDEX: <contribute> and <annotation>.

Note: the print-friendly 'text' file does not include dates for new and modified terms.

Use of ScOT data in applications is subject to license and is available at:

<://vocabulary.curriculum.edu.au/scot>.

ScOT can also be accessed via SOAP Web Service. The ScOT Web Service is available at

<://scotws.curriculum.edu.au/ScotWs/>.

9 Appendix

9.1 Proportion of terms by level

A common issue for thesaurus management is “how many levels” should be in the hierarchy. This, together with the number of ‘top terms’ together indicate the depth and breadth of concepts covered. Thesaurus dimensions should match the breadth, specificity and complexity of concepts located in user content. Search interface issues are also a consideration; the ten ScOT Top Terms are a good starting point for top-down browsing both in the public thesaurus interface and within website navigation systems¹.

Targets for hierarchy depth are sometimes arbitrarily assigned in thesaurus management guidelines (e.g. “between 5 and 7”). An alternative approach is to manage and report the proportion of terms at each level. Details of how many levels a thesaurus ‘drills down’ should be presented within the context of where most indexing terms are located.

¹ See “Top Terms” at <http://scot.curriculum.edu.au/advanced.htm>; “Browse by topic” at <http://www.scootle.edu.au/ec/p/home>.

9.2 Percentage of terms within 5 and 6 levels

Term level	v.5	v6.0	v6.2	v6.3	v6.4	V6.5
1	8	10	10	10	10	10
2	96	123	131	119	160	99
3	1064	1081	955	964	944	893
4	2505	2771	2820	2829	2847	2813
5	2597	2560	2370	2378	2412	2529

9	297	124	80	78	79	90
10	60	105	102	106	192	149
11	7	37	41	54		84
12		4	4	22		32
13		4	3	7		6
% in top 5 levels	57.56%	74.06%	76.88%	76.12%	75.93%	73.8%
% in top 6 levels	78.25%	92.70%	90.67%	90.22%	90.03%	88.55%

9.3 Non-preferred term rates

Non-preferred terms² (also called entry terms or see references) increase entry to concepts by managing ambiguity between synonymous or near-synonymous concepts. In v6.4, the proportion of non-preferred terms continues to increase. This trend reflects both addition of new non-preferred terms and the consolidation of preferred terms that are used to index similar concepts.

	v5.0	v6.0	v6.3	v6.4	v.6.5
Top Terms	8	10	10	10	10
Total terms	8,966	10,321	10,792	11,119	12,049
Preferred	7,083	7,666	7,569	7,568	7,856
Non-preferred	1,883	2,655	3,223	3,554	4,193
% Non-preferred	21%	25.7%	29.9%	32%	34.8%

² Only displayable non-preferred terms are considered here. A small number of 'Hidden' labels are available in the SKOS RDF format.
