Introduction

1.1 Purpose

Report changes to the Schools Online Thesaurus.

1.2 Audience

ScOT Consultative Group and other interested parties.

2.0 Background

2.1 Australian Curriculum

ScOTv6.6 further aligns closely with the Australian curriculum while retaining reference structures and word stock built up over 9 years of consultation with the school sector and via application to many substantial content projects. Two project activities that have provided significant warrant to changes in this release should be emphasised.

First, digital curriculum resource projects that target alignment with the Australian Curriculum have provided a valuable source of new ScOT terms. As publishers develop new resources, digitize existing offline resources or aggregate previously published items around curriculum objectives, ScOT has been exposed to quality and targeted literature that has helped to refine word stock and reference structures.

Second, ScOT has been applied to the Australian Curriculum *itself*. ScOT has been used as the default subject vocabulary for tagging RDF descriptions of Australian Curriculum in the four released learning areas. Using ScOT in this way supports inferences between specific curriculum elements and digital curriculum resources. Profiling the Australian Curriculum is an activity itself that has brought together curriculum designers, subject matter experts and vocabulary managers in a dialogue that has reinforced quality assurance processes for ScOT development and maintenance.

3.0 ScOT data release

ScOT point releases follow a feedback cycle involving users, curriculum experts, school jurisdictions and education agencies via the ScOT Consultative Group. The ScOT Management Group has final approval of each release. This quality assurance process continues to be invaluable to the relevance and currency of ScOT to the ANZ school sector.

In-between point releases, mini-batches are released. Stakeholders can access information about new terms published or modified between in mini batches (such as between ScOTv6.5 and ScOT6.6) by accessing ScOT data from the website or via Web services. All changes are later detailed in quality assurance summaries (this document).

Note: only standard formats have date properties for terms; for new terms and modified terms the properties are:

- SKOS RDF: <dct:issued> and <dct:modified>;
- IMS VDEX: <contribute> and <annotation>.

Note: the print-friendly 'text' file does not include dates for new and modified terms.

Use of ScOT data in applications is subject to license and is available at:

<http://vocabulary.curriculum.edu.au/scot>.

ScOT can also be accessed via SOAP Web Service. The ScOT Web Service is available at

<http://scotws.curriculum.edu.au/ScotWs/>.

7.0 Appendix

7.1 Proportion of terms by level

A common issue for thesaurus management is “how many levels” should be in the hierarchy. This, together with the number of ‘top terms’ together indicate the depth and breadth of concepts covered. Thesaurus dimensions should match the breadth, specificity and complexity of concepts located in user content. Search interface issues are also a consideration; the ten ScOT Top Terms are a good starting point for top-down browsing both in the public thesaurus interface and within website navigation systems¹.

Targets for hierarchy depth are sometimes arbitrarily assigned in thesaurus management guidelines (e.g. “between 5 and 7”). An alternative approach is to manage and report the proportion of terms at each level. Details of how many levels a thesaurus ‘drills down’ should be presented within the context of where most indexing terms are located.

¹ See “Top Terms” at <http://scot.curriculum.edu.au/advanced.htm>; “Browse by topic” at <http://www.scotle.edu.au/ec/p/home>.

7.2 Percentage of terms within 5 and 6 levels

Term level	v.5.0	v6.0	v6.2	v6.3	v6.4	v6.5	v6.6
1	8	10	10	10	10	10	10
2	96	123	131	119	160	99	97
3	1064	1081	955	964	944	893	900
4	2505	2771	2820	2829	2847	2813	2858
5	2597	2560	2370	2378	2412	2529	2566
6	2254	1648	1127	1167	1183	1268	1315

9	297	124	80	78	79	90	90
10	60	105	102	106	192	149	160
11	7	37	41	54		84	80
12		4	4	22		32	33
13		4	3	7		6	6
% in top 5	57.56%	74.06%	76.88%	76.12%	75.93%	73.8%	73.46%
% in top 6	78.25%	92.70%	90.67%	90.22%	90.03%	88.55%	88.48%

7.3 Non-preferred term rates

Non-preferred terms² (also called entry terms or see references) increase entry to concepts by managing ambiguity between synonymous or near-synonymous concepts. In v6.6, the proportion of non-preferred terms continues to increase and is accounted for mainly by addition of new non-preferred terms.

	v5.0	v6.0	v6.3	v6.4	v.6.5	v6.6
Top Terms	8	10	10	10	10	10
Total terms	8,966	10,321	10,792	11,119	12,049	12,827
Preferred	7,083	7,666	7,569	7,568	7,856	8,019
Non-preferred	1,883	2,655	3,223	3,554	4,193	4,808
% Non-preferred	21%	25.7%	29.9%	32%	34.8%	37.5%

² Only displayable non-preferred terms are considered here. A smaller but growing number of 'Hidden labels' are available in the SKOS RDF format. The hidden labels are lexical variants such as alternative spellings.
